Jacob Sanders

React / Next.js Software Engineer

602-486-5777 | jtsanders87@gmail.com | linkedin.com/in/jacob-t-sanders

SUMMARY

Software engineer who has shipped and maintained production systems for 13+ years, with the last three focused on component-driven product UI and currently building React and Next.js applications full time. Owns the frontend of a live multi-tenant SaaS platform: roughly 120 React components on Next.js App Router, with TanStack Query, Zustand, React Hook Form/Zod, and a Jest, React Testing Library, and Playwright suite behind it. Two-time founder used to sitting with non-technical clients, turning what they describe into working software, and then staying on it through release, support, and the bug reports that follow. Has delivered in consumer electronics, industrial manufacturing, digital assets, and healthcare-adjacent SaaS, and ramps quickly on whatever the next domain is.

EXPERIENCE

Lien Into Revenue Services, LLC — Huntington Beach, CA (Remote)
Co-Founder / Lead Engineer — August 2025 – Present

- Build, ship, and maintain the production Next.js (App Router) React/TypeScript application that runs the full personal-injury lien lifecycle for chiropractic practices, from patient intake through lien negotiation and settlement collection
- Own the frontend architecture end-to-end: ∼120 components in a layered MVVM structure (view models, stores, providers, data-access layer), with TanStack Query for server state, Zustand for client state, React Hook Form and Zod for validated multi-step intake forms, and MUI plus Tailwind for a consistent component system
- Deliver role-based, multi-tenant UI behind route guards so intake specialists, collections agents, and supervisors each see only their own practice's cases; added drag-and-drop collector queues, virtualized high-volume case lists, and Recharts reporting views
- Hold the quality line with Jest and React Testing Library unit tests plus Playwright end-to-end suites, a tracked bug list, semantic release versioning, and per-branch deploy environments so features ship and roll back independently
- Scope features directly with the chiropractors and case managers who use the product, then carry each one through implementation, release, and post-release support and triage

ARK Electronics — Remote
Full-Stack Engineer (1099 Contract) — February 2025 – April 2025

- Embedded with the client to scope requirements from scratch and ship a cloud-based manufacturing traceability platform end-to-end in weeks, covering product setup, serial number generation, barcode artifact creation, and test-result tracking for production and QA workflows
- Built the React/TypeScript/Vite frontend on the CoreUI component library, ∼40 components spanning operator-facing production workflows and administrative configuration screens
- Backed it with a serverless AWS backend (Lambda, AppSync GraphQL, API Gateway, DynamoDB, S3, Cognito) exposing dual API surfaces, GraphQL for the web UI and REST for external clients, with event-driven status updates for long-running generation batches

The Honeydew App, Inc. — Salt Lake City, UT (Remote)
Founder — April 2023 – February 2025

- Founded an on-demand handyman services marketplace; owned all system architecture and the majority of engineering while directing 4 University of Utah CS interns across frontend and backend workstreams
- Built a component-driven MVVM client on a serverless TypeScript backend (Supabase/PostgreSQL), designing the relational schema, auth, row-level access rules, and real-time job dispatch
- Led UI/UX design in Figma alongside an intern designer, producing complete user flows and high-fidelity mockups before a line of UI code was written

Nerd United — Lehi, UT (Hybrid)
Blockchain Engineer — April 2022 – April 2023

- Built and deployed a production generative-AI pipeline in Python, orchestrating an image-generation API, IPFS pinning, and ERC-721 contract deployment as an automated multi-step workflow
- Developed blockchain applications in Go and Solidity on EVM-based protocols for cryptocurrency clients; deployed 8 Proof-of-Authority testnets and 4 production mainnets with security controls and access enforcement across infrastructure

Skullcandy Park City, UT
Firmware Architect October 2018 – March 2022

- Led a team of 3–5 engineers and served as primary liaison to Apple's MFi program office, translating technical constraints for executives, product managers, and cross-functional partners at every level of the organization
- Authored a C# desktop application for USB firmware updates and a Python CLI build toolchain with automated regression tests, replacing a manual process and cutting nightly validation cycles
- Established platform-wide design patterns and coding standards across a portfolio of consumer audio products, improving code quality and reducing per-product bring-up time

Code Corporation Draper, UT
Senior Firmware Engineer August 2013 – October 2018

- Led 3–4 engineers building advanced barcode reading systems from board bring-up through production; drove Agile/Scrum adoption within the team
- Integrated a JavaScript engine for runtime-configurable device behavior and cut firmware upgrade time from ∼3 min to ∼60 sec via USB Mass Storage optimization

TECHNICAL SKILLS

Frontend	React (hooks, context, composition), Next.js (App Router, server & client components, route handlers), TypeScript, MUI, Tailwind CSS, React Hook Form + Zod, TanStack Query, Zustand, Recharts, list virtualization, Vite, responsive & role-based UI, Figma
Testing & Quality	Jest, React Testing Library, Playwright (E2E), pytest, xUnit, Sentry observability, code review, CI/CD, per-branch preview environments, Agile/Scrum
Backend / APIs	Node/TypeScript, ASP.NET Core, EF Core, FastAPI, REST & GraphQL API design, serverless (AWS Lambda, AppSync, API Gateway), auth (Cognito), event-driven workflows
Databases	PostgreSQL (Supabase), relational schema & data modeling, T-SQL / stored procedures, DynamoDB
Languages	TypeScript, JavaScript, Python, C#, Go, C, C++
AI-Assisted Dev	Claude Code in a spec/plan/review loop, Claude API (Anthropic SDK), structured outputs, RAG / semantic search
Industries	Healthcare-adjacent legal SaaS, industrial manufacturing, consumer electronics, blockchain & digital assets, home-services marketplace, developer education

PROJECTS

Resumi: LLM Resume/Job-Matching Platform Next.js 16, React 19, TypeScript, Tailwind, Sentry
Full-stack Next.js app that scores job postings against a resume via the Claude API (structured JSON breakdowns across skills, experience, domain, requirements) and ranks matches with semantic search over vector embeddings. Server-side rate limiting, bot protection, prompt caching, backoff retries, and Sentry observability; deployed on Vercel. github.com/jsanders5/resumi

PySando: Interactive Python Learning Platform React, TypeScript, FastAPI, pytest
React frontend over a FastAPI backend that sandboxes and grades learner code against hidden pytest suites, paired with a Claude-powered tutor grounded in the live lesson, exercise, and learner's code and guardrailed to never reveal solutions. Async multi-turn conversation state and graceful degradation when no API key is present. github.com/jsanders5/PySando

Sentics: Multi-Stage Signal Pipeline & Dashboard Next.js 16, React 19, Python, Supabase/PostgreSQL
Next.js dashboard over a serverless pipeline screening top crypto assets: a deterministic technical-analysis stage sets directional calls while LLM stages write rationale under a strict output whitelist. Model-tiered for cost (88% run-cost reduction) with a leak-free forward-tracking eval harness scoring live calls against realized returns. github.com/jsanders5/sentics

EDUCATION

University of Utah Salt Lake City, UT
M.S., Electrical & Computer Engineering • B.S., Computer Engineering 2013
