

Jacob Sanders

Full-Stack Developer — C# / Web & Ecommerce Platforms

📞 602-486-5777 | ✉️ jtsanders87@gmail.com | 🔗 [linkedin.com/in/jacob-t-sanders](https://www.linkedin.com/in/jacob-t-sanders)

SUMMARY

Full-stack engineer and two-time founder with 13+ years shipping production software end-to-end. Returning candidate with direct Skullcandy tenure (Oct 2018 – Mar 2022, Firmware Architect) and first-hand familiarity with the company's engineering culture and cross-functional structure. Ships fast across unfamiliar stacks: production C# tooling, React/Next.js frontends, serverless AWS backends (Lambda, DynamoDB, AppSync GraphQL, REST APIs), and LLM applications built directly on the Claude API using modern AI-assisted development workflows (Claude Code, Cursor). Actively extending this breadth into ASP.NET Core, Entity Framework, and Shopify Liquid/theme development to round out the .NET and ecommerce stack this role requires.

EXPERIENCE

Lien Into Revenue Services, LLC, Huntington Beach, CA (Remote) • Aug 2025 – Present

Co-Founder

- Co-founded and built a production SaaS platform managing the full lifecycle of personal injury chiropractic cases, from patient intake through lien negotiation and settlement collection
- Built the Next.js/React frontend and a serverless AWS backend (DynamoDB, Lambda, AppSync GraphQL, Cognito, S3, CloudFront) via AWS Amplify, integrating with external business systems end-to-end

ARK Electronics, Remote • Feb 2025 – Apr 2025

Full-Stack Engineer (1099 Contract)

- Scoped requirements from scratch with the client and shipped a cloud-based manufacturing traceability platform end-to-end in weeks
- Built a React/TypeScript frontend and a serverless AWS backend exposing dual API surfaces — GraphQL for the web UI, REST for external/third-party clients — with API key management, usage plans, and throttling

The Honeydew App, Inc., Salt Lake City, UT (Remote) • Apr 2023 – Feb 2025

Founder

- Founded an on-demand handyman services marketplace; owned system architecture and the majority of engineering while directing 4 university CS interns across frontend and backend workstreams
- Built the mobile app (Flutter, MVVM) on a serverless TypeScript/Supabase backend covering auth, real-time job dispatch, and data persistence

Nerd United, Lehi, UT (Hybrid) • Apr 2022 – Apr 2023

Blockchain Engineer

- Built and deployed a production generative-AI pipeline in Python, orchestrating an image-generation API, IPFS pinning, and smart-contract deployment as an automated multi-step workflow
- Developed blockchain applications in Go and Solidity for cryptocurrency clients, including automated test coverage and access-control review

Skullcandy, Park City, UT • Oct 2018 – Mar 2022

Firmware Architect

- Authored a C# desktop application for USB firmware updates and a Python CLI build-toolchain with automated regression tests, eliminating manual flashing and compressing nightly validation cycles
- Directed 3–5 engineers through the full product lifecycle and served as primary liaison to Apple's MFi program office — translating technical constraints for non-technical stakeholders and cross-functional partners
- Established platform-wide design patterns and standards that improved code quality and cut per-product bring-up time across the portfolio

Code Corporation, Draper, UT • Aug 2013 – Oct 2018

Senior Firmware Engineer

- Led 3–4 engineers building production systems from the ground up, driving Agile/Scrum adoption within the team
- Cut device firmware upgrade time from ~3 min to ~60 sec via USB storage optimization, a 3× improvement in field-servicing throughput

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, Python, Go, C/C++

Web / Frontend: React, Next.js, Shopify Liquid & theme development, HTML/CSS, responsive UI development

Backend / APIs: ASP.NET Core, EF Core, REST & GraphQL API design, webhook/HMAC integrations, serverless architecture (AWS Lambda), event-driven workflows

Databases: T-SQL, stored procedures, DynamoDB, Supabase/Postgres, relational data modeling, CRUD design

Cloud / DevOps: AWS (Lambda, AppSync, API Gateway, DynamoDB, S3, CloudFront, Cognito), Vercel, Git, Docker

AI-Assisted Dev: Claude API, Claude Code, Voyage AI embeddings, RAG (retrieval-augmented generation), structured outputs, prompt engineering

PROJECTS

Shopify Inventory Sync & Storefront Alert (.NET / Shopify)

ASP.NET Core 8, C#, EF Core, SQL Server-compatible, Shopify Liquid & App Proxy, xUnit, Claude API, Voyage AI • github.com/jsanders5/dotnet-shopify-demo

A .NET 8 Web API + Shopify storefront integration built to close specific skill gaps against Skullcandy's own Full Stack Developer — .NET/Shopify posting, plus a bonus RAG feature demonstrating applied AI-tool proficiency.

- Built an ASP.NET Core 8 Web API with EF Core Code-First models, REST endpoints, and a raw SQL stored procedure (GetLowStockProducts, via FromSqlRaw) against a SQL Server-compatible engine
- Implemented a Shopify webhook receiver verifying HMAC-SHA256 signatures before persisting real inventory_levels/update payloads
- Built a Shopify Liquid storefront customization (a live low-stock badge) calling the API through a Shopify App Proxy, verified end-to-end against a real development store in both directions
- Added a retrieval-augmented generation feature — Voyage AI embeddings, Claude Haiku answer generation, cosine-similarity retrieval — giving shoppers grounded product answers, with a live side-by-side comparison against an ungrounded baseline
- Used Claude Code in a structured spec/plan/implementation/automated-review workflow to build and ship the project
- xUnit tests covering CRUD, webhook verification, and the RAG endpoint; public GitHub repo with full commit history

Sentics: Multi-Agent Crypto Signal Pipeline

Python, Claude API, Next.js, Supabase, Vercel • github.com/jsanders5/sentics

Serverless multi-agent pipeline with a deterministic technical-analysis stage, a Claude synthesis stage under a strict output whitelist, and a structured news-sentiment stage. Model-tiered for cost (88% run-cost reduction) with a leak-free forward-tracking eval harness scoring live calls against realized returns.

Resumi: LLM Resume/Job-Matching Platform

Next.js, TypeScript, Claude API, Voyage embeddings • github.com/jsanders5/resumi

Full-stack app scoring job postings against a resume via the Claude API (structured JSON breakdowns) and ranking matches with semantic search over Voyage embeddings. Prompt caching, backoff retries, Sentry observability; deployed serverless on Vercel.

PySando: Interactive Python Learning Platform

FastAPI, React, Claude API, pytest • github.com/jsanders5/PySando

Full-stack tutorial that sandboxes and grades learner code against hidden pytest suites, paired with a Claude-powered tutor grounded in the live lesson and learner's code, guardrailed to never reveal solutions.

EDUCATION

University of Utah, Salt Lake City, UT • 2013

M.S., Electrical & Computer Engineering • B.S., Computer Engineering
