Jacob Sanders

Full-Stack Software Engineer

602-486-5777 | jtsanders87@gmail.com | linkedin.com/in/jacob-t-sanders

SUMMARY

Full-stack engineer and two-time founder who has shipped, owned, and maintained production software end-to-end for 13+ years, most recently building React/TypeScript frontends on relational and serverless backends. Uses AI development tools daily, including Claude Code in a structured spec/plan/review workflow, to carry features from scoping through deployment. Comfortable across the stack and quick on unfamiliar ones, with production code shipped in TypeScript, Python, C#, Go, and C/C++. Invests in the work that keeps a codebase healthy: automated tests, observability, and developer tooling. Does his best work on small teams where ownership and initiative matter more than process.

EXPERIENCE

Lien Into Revenue Services, LLC — Huntington Beach, CA (Remote)
Co-Founder — August 2025 – Present

- Co-founded and developed a production SaaS platform that manages the full lifecycle of personal injury chiropractic cases, from patient intake through lien negotiation and settlement collection
- Built the frontend in Next.js (App Router) and React, delivering a responsive role-based UI for chiropractors and case managers
- Designed the serverless backend (DynamoDB, Lambda, AppSync GraphQL, Cognito, S3) as TypeScript infrastructure-as-code, with per-branch deploy environments so features ship and roll back independently
- Owned features end-to-end, from scoping with non-technical stakeholders through implementation, deployment, and post-release fixes, including a lien negotiation module for tracking liens, settlement offers, and collection status
- Built with Claude Code in a spec/plan/review loop, using AI tooling to compress the path from requirement to shipped feature

ARK Electronics — Remote
Full-Stack Engineer (1099 Contract) — February 2025 – April 2025

- Embedded with the client to scope requirements from scratch and ship a cloud-based manufacturing traceability platform end-to-end in weeks, covering product setup, serial number generation, barcode artifact creation, and test-result tracking for production and QA workflows
- Built a React/TypeScript/Vite (CoreUI) frontend and a fully serverless AWS backend using Lambda, AppSync (GraphQL), API Gateway (REST), DynamoDB, S3, and Cognito
- Exposed dual API surfaces (GraphQL for the web UI, REST for external clients) with API key management, usage plans, throttling, and event-driven job status updates for long-running generation batches

The Honeydew App, Inc. — Salt Lake City, UT (Remote)
Founder — April 2023 – February 2025

- Founded an on-demand handyman services marketplace; owned all system architecture and the majority of engineering while directing 4 University of Utah CS interns across frontend and backend workstreams
- Built a serverless TypeScript backend on Supabase/PostgreSQL, designing the relational schema, auth, row-level access rules, and real-time job dispatch, paired with a Flutter (MVVM) consumer-facing mobile app
- Led UI/UX design in Figma in collaboration with an intern designer, producing complete user flows and high-fidelity mockups; delivered ~90% MVP completion before redirecting focus to a new venture

Nerd United — Lehi, UT (Hybrid)
Blockchain Engineer — April 2022 – April 2023

- Built and deployed a production generative-AI pipeline in Python, orchestrating the OpenAI image-generation API, IPFS pinning, and ERC-721 contract deployment as an automated multi-step workflow
- Developed blockchain applications in Go and Solidity on EVM-based protocols for cryptocurrency clients; deployed 8 GETH-based Proof-of-Authority testnets and 4 production mainnets, with security controls and access enforcement across infrastructure

Skullcandy — Park City, UT
Firmware Architect — October 2018 – March 2022

- Authored a C# desktop application for USB firmware updates and a Python CLI build toolchain with automated regression tests, replacing a manual process and cutting nightly validation cycles

- Established platform-wide design patterns and coding standards across a portfolio of consumer audio products, improving code quality and reducing per-product bring-up time
- Led a team of 3–5 engineers and served as primary liaison to Apple's MFi program office, translating technical constraints for non-technical stakeholders and cross-functional partners

Code Corporation Draper, UT
Senior Firmware Engineer August 2013 – October 2018

- Led 3–4 engineers building advanced barcode reading systems from board bring-up through production; drove Agile/Scrum adoption within the team
- Integrated a JavaScript engine for runtime-configurable device behavior and cut firmware upgrade time from ∼3 min to ∼60 sec via USB Mass Storage optimization
- Implemented a secure bootloader and BLE firmware for the Nordic nRF52832 SoC and contributed Linux kernel patches for image sensor, GPIO/PWM, and USB Mass Storage support

TECHNICAL SKILLS

Languages	TypeScript, Python, C#, Go, C, C++, Kotlin, Swift
Frontend	React, Next.js, TypeScript, responsive & component-driven UI, Vite, GraphQL, Figma
Backend / APIs	ASP.NET Core, EF Core, FastAPI, Node/TypeScript, REST & GraphQL API design, serverless (AWS Lambda), event-driven workflows, webhook/HMAC integrations
Databases	PostgreSQL (Supabase), relational schema & data modeling, T-SQL / stored procedures, DynamoDB
AI-Assisted Dev	Claude Code, Claude API (Anthropic SDK), RAG / semantic search (Voyage AI embeddings), structured outputs, prompt engineering, LLM evals
Testing & Tooling	pytest, xUnit, automated regression testing, Sentry observability, CI/CD, code review, Git, Docker, Agile/Scrum

PROJECTS

Shopify Inventory Sync & Storefront Alert ASP.NET Core 8, EF Core, T-SQL, xUnit, Claude API
A statically-typed ASP.NET Core 8 / EF Core Web API that HMAC-verifies real inventory webhooks and persists updates through a T-SQL stored procedure, paired with a storefront badge served over a reverse-proxied endpoint and verified end-to-end against a live store. Added grounded product Q&A (Voyage AI embeddings, Claude Haiku RAG) with a live grounded-vs-ungrounded comparison. Built with Claude Code in a structured spec/plan/review workflow; xUnit-tested. github.com/jsanders5/dotnet-shopify-demo

Resumi: LLM Resume/Job-Matching Platform Next.js, React, TypeScript, Claude API, Sentry
Full-stack React/Next.js app that scores job postings against a resume via the Claude API (structured JSON breakdowns across skills, experience, domain, requirements) and ranks matches with semantic search over Voyage embeddings. Prompt caching, backoff retries, and Sentry observability; deployed on Vercel. github.com/jsanders5/resumi

PySando: Interactive Python Learning Platform FastAPI, React, pytest, Claude API
Full-stack tutorial that sandboxes and grades learner code against hidden pytest suites, paired with a Claude-powered tutor grounded in the live lesson, exercise, and learner's code, guardrailed to never reveal solutions. Async multi-turn conversation state, provider abstraction, graceful degradation. github.com/jsanders5/PySando

Sentics: Multi-Stage Crypto Signal Pipeline Python, Claude API, Next.js, Supabase/PostgreSQL
Serverless pipeline screening top crypto assets: a deterministic technical-analysis stage sets directional calls and Claude stages write rationale under a strict output whitelist and distill news into structured sentiment. Model-tiered for cost (88% run-cost reduction) with a leak-free forward-tracking eval harness scoring live calls against realized returns. github.com/jsanders5/sentics

EDUCATION

University of Utah Salt Lake City, UT
M.S., Electrical & Computer Engineering • B.S., Computer Engineering 2013
